Annex 1. Evaluation matrix

Key evaluation question	Evaluation subquestion	Measure of assessment	KII	Survey	Deep dives	Documents review
1. How well have the priorities of the Task Force aligned with the stated needs of governments, non-state actors, the affected population, and with strategic priorities of its key UN agency members in light of the SDGs? (<i>relevance</i>)	1.1 How well aligned have the objectives and design of the Task Force been with the stated priorities of the governments involved in its work and with the needs of the affected populations?	Evidence of alignment with priorities stated by Member States in global commitments Perception of alignment and relevance by external stakeholders (governments, civil society organizations...)	x		x	x
	1.2 To what extent have the objectives and design of the Task Force been aligned with the strategic priorities of its members?	Evidence of alignment with strategic frameworks for member agencies Perceived alignment by stakeholders	x	x		x
	1.3 How have the objectives and design of the Task Force changed over time, and how well has the Task Force adapted its response to changing needs of countries?	Evidence of change in stated priorities according to context Perceived adaptation to changing priorities by external stakeholders	x	x	x	x
2. To what extent has the Task Force coordination and collaboration, including through its joint programmes, working groups and more recently the Health4Life Fund, been compatible with other internal and external initiatives? (<i>coherence</i>)	2.1 To what extent have the Task Force strategies and work promoted synergies and interlinkages with other relevant global health initiatives, including NCD and mental health initiatives and interventions of WHO and other members of the Task Force?	Evidence of synergies with global initiatives on NCDs and global health WHO-led and other global/regional health partnerships	x	x	x	x
	2.2 To what degree have the Task Force's collaborative efforts helped strengthen synergies, avoid duplication and leverage the	Evidence of increased alignment of Task Force members at country level)	x	x	x	x

Key evaluation question	Evaluation subquestion	Measure of assessment	KII	Survey	Deep dives	Documents review
	unique strengths and resources of the member organizations?					
3. What results has the Task Force achieved, whether intended or unintended, and what have been enabling and hindering factors? What challenges have emerged? <i>(effectiveness)</i>	3.1 How effective has the Task Force Secretariat been in fulfilling its expected functions including: (i) coordinating the implementation activities; (ii) monitoring and evaluating contribution; (iii) making adequate decisions to respond to changing circumstances; and (iv) engaging with partners at global, regional and country levels.	Evidence of initiatives by Secretariat in line with its functions Perception of effectiveness of Secretariat by Task Force members and other stakeholders	x	x		x
	3.2 To what extent has the Task Force achieved its stated objectives and expected results as outlined in its strategic documents?	Evidence of progress against stated outputs and outcomes in the TOC Perceived contribution of Task Force to progress on outcomes	x	x	x	x
	3.3 What have been the main internal and external factors influencing the Task Forces' ability to respond in the most relevant, effective and equitable manner possible?	Analysis of influencing factors based on ToC	x	x	x	x
	3.4 How efficiently has the Task Force used the resources at its disposal (including financial, human, physical, intellectual, organizational and political capital, and partnership)?	Evidence from budget analysis Perceived efficiency of Task Force Secretariat	x	x		x
4. To what extent are the benefits of the Task Force strategies and its implementation likely to continue? <i>(sustainability)</i>	4.1 Have appropriate steps been taken to ensure the continued institutionalization and scaling up of successful Task Force interventions within national health systems and other relevant platforms?	Evidence of efforts by Task Force to ensure the conditions of sustainability	x		x	x
	4.2 Are the results of the implementation of Task Force strategies, including institutional changes, durable over time?	Evidence of scale-up/institutionalization of Task	x	x	x	x

Key evaluation question	Evaluation subquestion	Measure of assessment	KII	Survey	Deep dives	Documents review
5. To what extent has the Task Force strategy and work addressed gender, equity and human rights concerns, disability inclusion, as well as other overarching principles in the WHO Global NCD Action Plan 2013–2030 to ensure that activities are consistently and meaningfully informed by considerations of overall equity? (<i>gender, equity and human rights</i>)	5.1 To what extent has the Task Force promoted at national and global levels to leave no one behind (i.e. the most vulnerable populations) and a rights-based approach?	Force initiatives at country level by member states				
		Perceived sustainability of Task Force's interventions				
		Evidence of Task Force initiatives focused on health equity	x	x	x	x
		Evidence of health equity/non-discrimination integrated across Task Force's interventions				
	5.2 To what degree have specific actions and interventions been implemented by the Task Force to promote gender equality and address the unique NCD-related risks and vulnerabilities of different gender groups?	Evidence of Task Force initiatives focused on gender	x	x	x	x
		Evidence of gender equality integrated across Task Force's interventions				
	5.3 How does the Task Force support the disability inclusion considerations in the development of frameworks, indicators, data collection tools and analytical methods to inform decision making?	Evidence of Task Force interventions integrating disability inclusion considerations	x	x	x	x

Annex 2. Stakeholders consulted

Table A2.1. Stakeholders interviewed as part of the evaluation

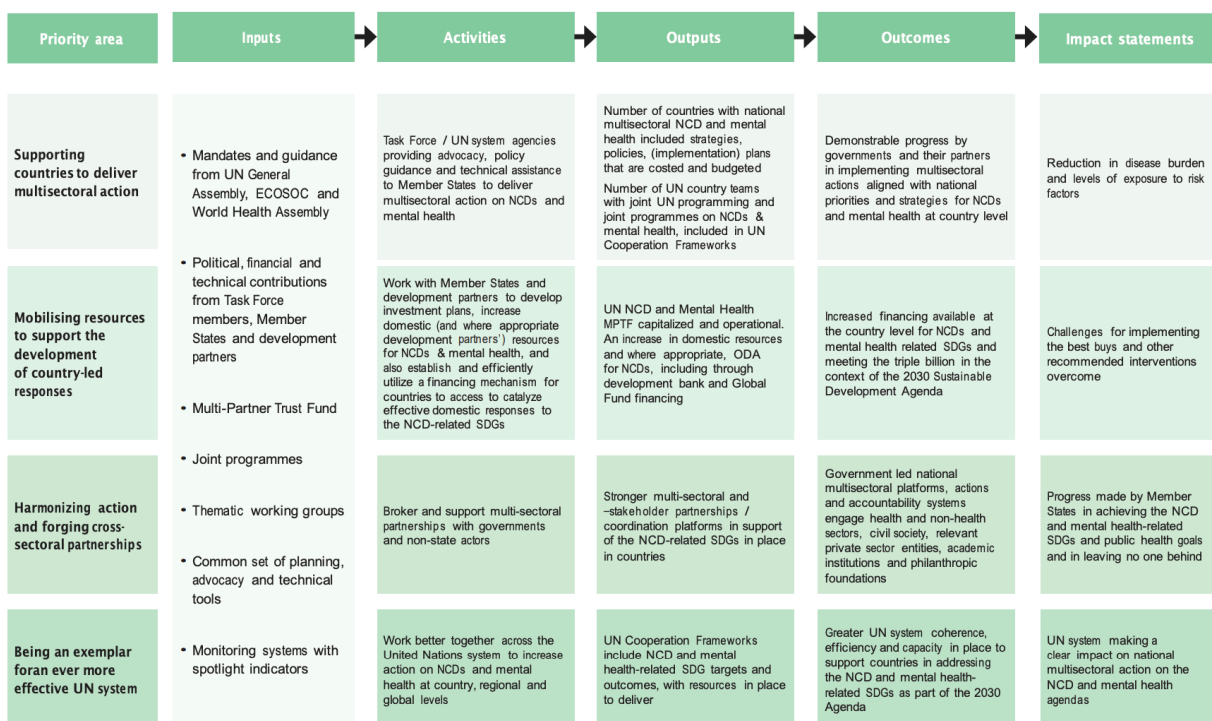

Stakeholder category	Organizations met	Number of interviews
UN Task Force on NCDs	Secretariat	7
Task Force Members – Task Force focal points and other staff working on health and NCDs	FAO, FCTC, IAEA, IDLO, OHCHR, UN Habitat, UNAIDS, UNDP, UNFPA, UNHCR, UNICEF, UNODC, UNRSF, World Bank, WHO, WTO	23
WHO	WHO headquarters departments on NCDs, Mental Health, Health Promotion, Resources Mobilization, Evaluation, GCM, Global NCD Platform	12
	WHO regional office staff working on NCDs and Mental Health: PAHO, EMRO, SEARO, AFRO	6
	WHO NCD focal points and other staff in country offices: Armenia, Ethiopia, Georgia, Kyrgyzstan, Malaysia, Singapore and Brunei, Nigeria, Philippines, Thailand	12
Donors funders	Government of Scotland, Gulf CDC, Tanzania NCD Alliance, Africa CDC, EU	4
Members States/ministries of health representatives	Armenia, Nigeria, Kyrgyzstan	4
Non State Actors	Tanzania NCD Alliance, Resolve to Save Lives, Movendi, United for Global Mental Health, Global NCD Alliance, International Union for Cancer Control, Nigeria Hearts	8

Annex 3. Theory of change

The Task Force Strategy includes a logic and change model, which shows the different results that the Task Force seeks to contribute to in four priority areas, as presented in Fig. 1 below.

Fig. A3.1. Logic and change model of the Task Force.

LOGIC AND CHANGE MODEL (9, 15)

Source: UN Interagency Task Force on NCDs Strategy (2022–2025)

This model served as a basis to develop a Task Force theory of change (ToC) model for the purpose of the evaluation. This revised model (Fig. 2) outlines the current understanding of the Task Force members of the contribution pathways and outlines key assumptions that were not included in the logic and change model. Compared to the change model presented in the current Task Force Strategy, the revised ToC introduces the following modifications:

The ToC provides more detail on the **impact** that the Task Force seeks to contribute to. The health impact sought by the Task Force's members goes beyond the SDG 3.4 target¹ to include a life course dimension (including age groups beyond the 30–70 range) as well as including a reduction in morbidity as well as in mortality, with a focus on vulnerable groups (for example refugees and migrants, people living with disability). The socio-economic aspects of impact also go beyond the macro-economic level to include increased opportunities for individuals through reducing

¹ The SDG 3.4 target is, by 2030, to reduce by one third premature mortality from noncommunicable diseases through prevention and treatment and to promote mental health and well-being.

health inequities. At systems level, the Task Force seeks to contribute to stronger, more resilient and more sustainably financed health systems that address comorbidities with communicable diseases and to potentiate co-benefits with other areas of rights beyond health (rights to a healthy environment, rights of the child). Key changes needed to achieve those changes are that countries: (i) implement the NCD best buys, (ii) better integrate NCDs in primary health care (PHC) and universal health care (UHC) policies, strategies and programming and (iii) address social and commercial determinants of health and promote mental health and well-being.

Key *assumptions* identified for those changes relate to the external forces that may affect health systems and societies, such as global and national fiscal space, climate change, urbanization, the way global targets are set (for example whether they exclude any age groups) and key changes in epidemiology and external shocks such as pandemics. In adverse contexts, participants noted that maintaining the status quo on NCD and mental health indicators may reflect a positive contribution to health system resilience.

To contribute to these results, the Task Force focuses on four *outcomes*, which build on those that are outlined in the current strategy and form the backbone of the Task Force's contribution.

- Governments progress sustainably in implementing multisectoral actions on NCDs and mental health. This includes that at municipal level authorities and partners work in urban settings to ensure that cities are reducing NCD risk factors and promote mental health and that the role of communities in driving change, their voice and accountability to them are promoted.
- Better financial frameworks on prevention and control of NCDs and for mental health are in place. This requires that partners and national governments mobilize more resources (both domestic and external) for NCDs and mental health.
- National Governments effectively engage all key actors in the NCD and mental health response, from government, agencies, civil society and the private sector.
- UN agencies increase their efforts on NCDs and mental health and better align and coordinate their support to countries at global, regional and country levels.

The main *assumptions* relating to those outcomes outline key dependencies: on sustained political will from national governments to pursue the NCD and mental health agenda; on populations' attitudes towards health advice and injunctions; on donors' motivation to contribute to long-term systemic changes needed; and within the UN on addressing competition for resources and clarifying respective mandates on NCDs to ensure alignment and facilitate collaborations while collectively increasing UN engagement on NCDs and mental health.

Key *outputs* identified under each of those four areas reflect the results to which the activities of the Task Force have contributed in countries where it has actively engaged.

- In relation to Governments implementing multisectoral responses, key expected outputs are that:
 - countries have NCD strategies and conducive policy frameworks in place, including at subnational levels planning/budgeting;
 - the focus from governments tackling NCD risk factors is on addressing commercial and social determinants of health as part of the right to health agenda instead of primarily focusing on individual responsibility; and
 - the strengthening of NCD and mental health services takes place as part of the PHC/UHC agenda (e.g. NCDs covered in UHC packages) inclusive of community health systems and supporting the health workforce.

- In relation to better financial frameworks on prevention and control of NCDs and for mental health, expected outputs for the Task Force are that:
 - there is a well-resourced, operational MPTF/Health4Life fund tracking progress on expected outcomes;
 - there is increased financing for NCDs and mental health at country level, including from official development assistance where appropriate; and
 - there are increased domestic resources for NCDs and mental health (e.g. NCDs and mental health are prioritized in health financing reforms, allocative efficiency increased).
- In relation to national governments effectively engaging all key actors in the NCD and mental health response, key expected outputs are:
 - better government-led governance/coordination of the NCD response, through stronger partnerships and multisectoral coordination in country through existing/new mechanisms to implement multisectoral action plans on NCDs and mental health; and
 - references to NCDs in broader agendas to ensure buy-in from countries and relevance to specific country needs.
- In relation to UN agencies increasing their efforts on NCDs and mental health and better aligning and coordinating their support, key expected outputs are that:
 - the NCD agenda is activated in the Task Force members, as evidenced in increased activities and investment in programme and policy work beyond mention of NCDs in the strategic plan;
 - the UNCTs in countries have joint programmes on NCDs and mental health; and
 - the United Nations Sustainable Development Cooperation Frameworks include NCDs and mental health priorities.

A number of *assumptions* were identified in relation to those outputs, mainly concerning the role of the Task Force: that the national governments request support from the Task Force, that the role of the Task Force as a mediator/arbitrator among agencies to facilitate coordination is accepted and recognized by all key stakeholders and that UN agencies are able to learn and apply successful collaboration practices, including translating any learning from humanitarian to development settings.

These outputs are expected to be achieved through the **activities** conducted by the Task Force, which are summarized as follows:

- providing advocacy and policy guidance including human rights-based approaches;
- providing political and technical assistance on NCDs and mental health to countries, particularly to strengthen whole-of government and whole-of society action through action between two or more Task Force members, such as developing investment cases;
- utilizing financing mechanisms/health financing reforms to integrate NCDs and mental health;
- brokering and supporting multisectoral partnerships;
- conduct joint missions that respond to context specific needs;
- raising awareness on NCDs and mental health within own agencies;

- exchanging information regularly through thematic working groups;
- developing a common strategy and M&E system aligned to/integrated into agencies' own frameworks;
- participating in global forums to ensure NCDs are integrated in global agendas; and
- reporting annually to the UN Economic and Social Council/highlighting the importance of financing NCDs and mental health.

The main *inputs* that the Task Force disposes of to realize these activities fall under the categories of:

- UN Economic and Social Council /UNGA mandate and guidance
- political, financial, technical contributions by agencies
- the Task Force Secretariat
- agencies' focal points and working groups
- political, financial, technical contributions by partners.

There are key *assumptions* relating to the availability of those inputs, in particular that turnover of focal points in agencies does not hamper the work of the Task Force and that the context of shrinking resources for UN development work and the change in the engagement of the Russian Federation as the historical donor and champion of the Task Force due to the current geopolitical context does not significantly impact the ability of the Task Force to operate.

Do you have any recommendations in terms of improving the Task Force's relevance, effectiveness and contribution going forward?

Evaluation survey questionnaire

Introduction page

Thank you for taking part in this survey, which is being implemented as part of the joint independent evaluation of the United Nations Inter-Agency Task Force on the Prevention and Control of Non-communicable Diseases. A team of two evaluators, composed of Florianne Gaillardin and Sugitha Sureshkumar, has been commissioned by WHO to conduct the evaluation, and this survey is one of various data collection methods being used to gather views on the work of the Task Force.

The purpose of the survey is to gather the perspectives of Task Force members and national governments stakeholders on the relevance, coherence, effectiveness and sustainability of the Task Force's work. Participation in the survey is entirely voluntary, and your responses are fully confidential and anonymous. No personally identifiable information will be shared beyond the two evaluators, and nothing in the report will be attributable to anyone completing the survey.

The results of the survey will be used alongside other sources of evidence to inform the evaluation. No questions are compulsory, but we encourage you to answer as many as you are able to. The survey will take around 30 minutes to complete.

Please click [here \(link\)](#) for English version, [here \(link\)](#) for French version, or [here \(link\)](#) for Spanish version of the survey.

Preliminary questions

The purpose of these questions is to identify which stakeholder category you belong to and your familiarity with the UN Task Force on NCDs. Your responses will help us to develop a disaggregated analysis of the survey's results and explore potential similarities or differences of views within or between key stakeholder groups.

1. What is your gender?
 - Female
 - Male
 - Non-Binary/non-conforming
 - Prefer not to say
2. Do you consider yourself to have a disability?
 - Yes
 - No
 - Prefer not to say
 -

3. How familiar are you with the work of the Task Force?
- Very familiar
 - Familiar
 - Unfamiliar
 - Very unfamiliar
 - NA
 -
4. Please select the stakeholder group type you identify with below:
- Task Force agency focal point
 - National government

Part 1. Relevance

The following questions ask you for your perceptions relating to the relevance of the Task Force work to national government priorities and population needs, especially the most marginalized.

5. (Government counterparts only) To what extent has the work of the Task Force aligned with the stated priorities of the national government on NCDs and mental health?
- To a large extent
 - To some extent
 - To a limited extent
 - To no extent
 - N/A or do not know
6. (Task Force agencies only) To what extent have the objectives and design of the Task Force been aligned with the strategic priorities of your organization?
- To a large extent
 - To some extent
 - To a limited extent
 - To no extent
 - N/A or do not know

Part 2. Coherence across the UN system

The following questions ask you for your perceptions related to the coherence of UN agencies' efforts on NCDs and mental health.

7. To what extent has the Task Force work promoted synergies and interlinkages with other relevant global health and development initiatives (for example the Lusaka agenda, UHC2030), including initiatives and interventions of the UN system?
- To a large extent
 - To some extent
 - To a limited extent
 - To no extent
 - N/A or do not know

8. To what extent has the Task Force's work contributed to better alignment and coordination between UN system agencies on NCDs and mental health:

	To a large extent	To some extent	To a limited extent	Not at all	N/A or do not know
8.a At global level					
8.b At regional level					
8.c At country level					

9. (Task Force agencies only) To what extent are the Task Force's strategy,¹ actions from Task Force meetings, recommendations provided to the UN Economic and Social Council in annual reports and resolutions from the UN Economic and Social Council influencing your organization's work and priorities on NCDs and mental health?
- To a large extent
 - To some extent
 - To a limited extent
 - Not at all
 - N/A or do not know

Part 3. Effectiveness

The following questions ask you for your perceptions related to the effectiveness of the work of the UN Task Force on NCDs.

10. How effective has the Task Force Secretariat been in fulfilling its expected functions:

	Very effective	Somewhat effective	Somewhat ineffective	Very ineffective	N/A or do not know
10.a Coordinating the implementation of activities among UN agencies on NCDs and mental health					
10.b Monitoring and evaluating the collective contribution of the UN on NCDs and mental health					
10.c Making adequate decisions to respond to changing circumstances					
10.d Engaging with partners at global, regional and country levels					

11. The UN Task Force has four broad strategic priorities.

The table below requires you to assess the extent to which the Task Force has contributed to the realization of results within these four areas at country level.

To what extent has the work of the Task Force contributed to:

¹ The four strategic priorities of the Task Force are: 1. Support national governments to implement multisectoral responses; 2. Contribute to better financial frameworks for NCDs and Mental Health; 3. Support national governments to effectively engage all key actors in the NCDs and mental health responses; and 4. UN agencies increasing their efforts on NCDs and mental health and better aligning and coordinating their support.

	To a large extent	To some extent	To a limited extent	Not at all	N/A or do not know
1. Multisectoral responses for NCDs and mental health					
11.a Government policy and strategy frameworks on NCDs and mental health					
11.b Commercial and social determinants of health to address risk factors					
11.c Strengthening of NCD and mental health services					
2. Financial frameworks for NCDs and mental health					
11.d Increase in government resources for NCDs and mental health (e.g. NCDs and mental health are prioritized in health financing reforms, allocation of resources to these areas is more efficient)					
11.e Development partners increase financing for NCDs and mental health					
3. Support national governments to effectively engage all key actors in the NCDs and mental health responses					
11.f Better government-led governance of the NCD response, through stronger partnerships and multisectoral coordination mechanism					
11.g Link NCDs to broader agendas to ensure buy-in from countries, ensure relevance to specific countries/expressed needs					
4. UN agencies increasing their efforts on NCDs and mental health and better aligning and coordinating their support.					
11.h UN Sustainable Development Cooperation Frameworks and other policies and strategies include NCDs and mental health priorities					
11.i UN country teams develop joint programmes on NCDs and mental health					
11.j UN agencies better coordinate their interventions on NCDs					

12. Please describe what has been the most important achievement of the Task Force in your view, and how the Task Force has contributed to it.

13. Are there other positive or negative changes that the Task Force's work has contributed to in your area of work (Task Force agencies)/country (government counterparts)? If so, please describe below:

14. (Task Force agencies only) To what extent are you able to track human and financial resources dedicated to NCDs and mental health in your organization?

- To a large extent
- To some extent
- To a limited extent

- Not at all
- N/A or do not know

15. (Task Force agencies only) To what extent has being a member of the Task Force led to an increased ability to mobilize political, human and financial additional resources in your agency for NCDs?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

16. (Task Force agencies only who replied “to a large extent”, “to some extent” or “to a limited extent” to Question 15) Please give details of the additional political, human and/or financial resources mobilized

17. (Task Force agencies only) What are key factors influencing the NCD and mental health agenda in your organization?

18. What have been the main factors influencing the Task Force success in delivering intended results?

Part 4. Contribution to health equity, gender equality, disability inclusion and the promotion of a human rights-based approach in NCD and mental health agendas

The following questions ask you for your perceptions related to the extent to which the work of the Task Force has adopted a human rights-based approach and integrated a health equity, gender equality and disability inclusion in its work.

19. To what extent have the objectives and design of the Task Force been explicitly informed by a gender analysis?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

20. To what extent has the work of Task Force addressed the needs of the marginalized populations on NCDs and mental health?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

21. (For those who replied “to a large extent”, “to some extent” or “to a limited extent”) Could you describe the ways in which the task force has taken into account the needs of marginalized groups?

22. To what extent has the Task Force integrated disability inclusion considerations in its work?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

23. To what extent has the Task Force ensured that people with disability can participate in its work and access its products?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

24. What are key results from the work of the Task Force in promoting rights-based approaches, gender equality and diversity and inclusion?

Part 5. Sustainability

The following questions ask you for your perceptions related to the sustainability of the contribution of the UN Task Force on NCDs.

25. To what extent are the contributions of Task Force likely to be durable over time if the Task Force ceased to exist?

- To a large extent
- To some extent
- To a limited extent
- Not at all
- N/A or do not know

26. What steps have been taken to ensure that the Task Force's contribution is sustained or scaled up through government interventions at country level?

Ending Question

27. Is there anything further you think it would be useful for us to know, or that you would like to share with the Evaluation Team?

Annex 5. References to the Task Force in its members' strategic frameworks

Table A5.1. Task Force relevance to strategic priorities of agencies that have co-chaired Task Force meetings

Agency	Strategy	Mentions the Task Force?	Relevance of Task Force
AIEA	Medium Term Strategy 2024–2029	No	Noncommunicable diseases such as cancer are rising at an alarming rate, with the greatest increases in low and middle income countries. The demand for quality health care for noncommunicable and infectious diseases will increase the need for diagnostics imaging and radiological treatments. Partnerships with the WHO, professional bodies and other organizations will continue to play a crucial role in the implementation of the Agency's activities.
FAO	Vision and Strategy for FAO's Work in Nutrition	No	Reducing wasting, stunting, underweight, micronutrient deficiencies, overweight, obesity and diet-related NCDs has the potential to contribute to reaching targets across the SDG.
FCTC	Global Strategy to accelerate tobacco control 2019-2025	Yes	Specific objective: "Develop mutually reinforcing approaches to implementing the Global Action Plan for the Prevention and Control of Noncommunicable Diseases 2013–2020 through cooperation with members of the United Nations Interagency Task Force on the Prevention and Control of Non-communicable Diseases (UNIATF), the Global Coordination Mechanism for NCDs and other relevant initiatives."
ILO	Global Strategy on Occupational Safety and Health 2024–30 and plan of action for its implementation	Yes	Synergies will be maximized to improve the delivery of programmes and initiatives, and enhanced options for collaboration with the WHO will be explored to ensure mutually reinforcing and coherent advocacy and awareness-raising, policy advice and country-level interventions. Other options will be explored to increase the effectiveness of current collaborations, such as (...) the United Nations Inter-Agency Task Force on the Prevention and Control of Non-communicable Diseases.
OHCHR	CRC/C/GC/15: General Comment No. 15 on the right of the child to the highest attainable standard of health (2013), The Committee on the Rights of the Child	No	Although there is no mention of NCDs in the General Comment No. 14 (2000) on the right to the highest attainable standard of health (article 12 of the International Covenant on Economic, Social and Cultural Rights), the CRC/C/GC/15: General Comment No. 15 on the right of the child to the highest attainable standard of health (2013), the Committee on the Rights of the Child mentions NCDs as one of the key factors affecting children's health. Within the right to health, OHCHR focuses on NCDs and particularly through the Task Force. The OHCHR webpage on NCDs mentions that "OHCHR is a member of the Task Force and advocates for the inclusion of human rights in the work of the task force." Key areas of focus include enabling legal and policy framework; giving attention to individuals, groups and communities in situations of marginalization; promoting a human rights-based approach to data collection; advocating for the use of maximum resources towards health.

UNAIDS	Global AIDS Strategy 2021-2026	No	UNAIDS Strategy acknowledges the comorbidities between NCDs and HIV, in particular in relation to cervical cancer, for which women living with HIV are at increased risk.
UNDP	UNDP HIV and Health strategy 2022–2025	Yes	<p>One of the key priorities for the period is to “strengthen governance, including to address NCDs, mental health and accelerate tobacco control”. Strengthening multisectoral health governance, including of NCD, mental health and tobacco control responses, the development of investment cases and the integration of NCDs, mental health and tobacco control into development plans and strategies</p> <p>UNDP works closely with WHO as a member of the United Nations Interagency Task Force on the Prevention and Control of NCDs.</p> <p>Within the division of labour of the Inter-Agency Task Force on NCDs, UNDP (with WHO and UNAIDS) convenes the work of the United Nations and other intergovernmental organizations to strengthen national capacity, leadership, governance and multisectoral action to accelerate the country response to NCDs.</p>
UNFPA	Strategic Plan 2022–2025	No, but mentions Task Force initiative	<p>A focus on cervical cancer: preventing and managing reproductive cancers and other morbidities, such as obstetric fistula.</p> <p>This was supported by a joint programme on cervical cancer with UNFPA, WHO and IAEA, implemented between 2018 and 2021.</p>
UNHCR	UNHCR Global Public health Strategy 2021-2025	No	The Strategy mentions partnerships with several members of the Task Force, but not the Task Force itself. It includes several references to the management and control of NCDs in refugee populations and host communities.
UNICEF	Strategy for Health 2016-2030	Yes	<p>While the Strategy does not set its own targets, it aims to contribute to the fulfilment of existing global commitments, including through the SDGs, by UNICEF as part of its strategic planning process, and through other initiatives where UNICEF is a partner (e.g. the Global Vaccine Action Plan, Global Polio Eradication Initiative and UN Interagency Task Force on NCDs).</p> <p>UNICEF’s engagement with partners mentions the Task Force as well as NCD Child. However, focus on ages 5–9 for NCDs is not currently fully reflected in Task Force’s work</p>
WFP	WFP strategic plan (2022–2025)	No	When required, WFP will support double duty actions that have the potential to simultaneously reduce the risk and burden of undernutrition and overweight, obesity and diet-related noncommunicable diseases.
WIPO	WIPO Strategy on Standard Essential Patents 2024–2026	No	No mention of NCDs and mental health.
WHO	Thirteenth General Programme of Work 2019–2023	Yes	<p>WHO will work with Member States and other partners in scaling up efforts to implement the high-impact and cost-effective measures needed, including by working through the WHO Independent High-level Commission on NCDs, the United Nations Inter-Agency Task Force on the Prevention and Control of Noncommunicable Diseases, the WHO Global Coordination Mechanism on the Prevention and Control of Noncommunicable Diseases, the United Nations Decade of Action on Nutrition and the United Nations Road Safety Collaboration, to persuade elected officials to make bold political choices for health.</p> <p>Task Force has mapped its strategic priorities against GPW13.</p>

World Bank	Nutrition and Population Sector Strategy	No (precedes Task Force creation)	<p>NCDs feature prominently in the Strategy:</p> <p>“In the near future, non-communicable diseases (NCDs) - led mainly by cardiovascular diseases, cancers and mental illness- and injuries will add to the list of common afflictions that burden the poor and that escalate costs of health care systems.</p> <p>Tobacco is the most prominent cause of NCDs, along with alcohol abuse and intake of foods high in saturated fats. In many middle-income countries, cardiovascular diseases are already the leading cause of death, and in low-income countries they are becoming increasingly important.”</p>

Annex 6. Deep dive studies

Kyrgyzstan Country Deep-Dive

Selection rationale

Kyrgyzstan was selected as one of two deep dive countries for this evaluation on the following criteria:

- a country in the WHO European region, where there is a high mortality and morbidity associated to NCDs; and
- a country where the Task Force has conducted several interventions since 2016, including a joint mission and an investment case, and dialogue is still ongoing between the Task Force and country stakeholders.

Data sources

Three stakeholders were interviewed remotely: one from the WHO Regional Office for Europe, one from the WHO country office and one from the ministry of health.

The following documents were consulted (all items except the last published in Geneva by WHO):

- Annual progress report towards the implementation of the Roadmap for health and well-being in Central Asia (2022–2025); 2023 (<https://iris.who.int/bitstream/handle/10665/369601/WHO-EURO-2023-7596-47363-69541-eng.pdf?sequence=1>).
- Annual report 2023: WHO Country Office in Kyrgyzstan; 2024 (<https://iris.who.int/bitstream/handle/10665/379609/WHO-EURO-2024-10545-50317-75911-eng.pdf?sequence=1>).
- Better non-communicable disease outcomes: challenges and opportunities for health systems. Kyrgyzstan Country Assessment: Focus on cardiovascular disease; 2014 (<https://kyrgyzstan.un.org/en/download/6068/29829>).
- Gender and noncommunicable diseases in Kyrgyzstan. Analysis of STEPS data; 2020 (<https://iris.who.int/bitstream/handle/10665/337488/WHO-EURO-2020-1668-41419-56461-eng.pdf?sequence=1>).
- Joint mission of the United Nations Interagency Task Force on the Prevention and Control of Noncommunicable Diseases; 2016 (<https://iris.who.int/bitstream/handle/10665/332118/WHO-NMH-NMA-17.86-eng.pdf?sequence=1&isAllowed=y>).
- NCD Monitor 2022; 2022 (<https://iris.who.int/bitstream/handle/10665/353048/9789240047761-eng.pdf?sequence=1>).
- Prevention and control of noncommunicable diseases in Kyrgyzstan: the case for investment; 2017 (<https://iris.who.int/bitstream/handle/10665/351407/WHO-EURO-2017-4787-44550-63088-eng.pdf?sequence=1>).
- Further documentation to consult: Kyrgyzstan - National program on prevention and control of NCD 2013–2020. Bishkek: 2020 (<https://www.iccp-portal.org/system/files/plans/KGZ%202013%20National%20Program%20on%20Prevention%20and%20Control%20of%20NCD.pdf>) (in Kyrgyz).

National context

NCDs are responsible for 83% of all deaths in Kyrgyzstan (1). The STEPwise approach to surveillance (STEPS) indicates that 25.7% of the Kyrgyz population smoke, 31.4% consume alcohol, 83.7% are physically inactive, 74% do not eat the recommended amount of fruits and vegetables and 21% use salt additives during mealtime (2). In terms of the national response, as shown in Table 4, the country is mostly on track for NCD surveillance and policy framework, and partially on track in terms of tobacco control measures except for mass campaigns. Alcohol control is less developed, with the country either partially or not on track on the corresponding indicators. For the unhealthy diet risk factor indicators, transfat control measures are in place, but progress remains to be done on other aspects (salt, breastfeeding substitutes and marketing to children). The country is on track for the indicator relating to physical activity promotion campaigns. In terms of NCD management, the country is on track for technical guidelines, but not in terms of cardiovascular disease services.

Task Force contributions

Activities

A Joint programming mission of the United Nations Interagency Task Force on the Prevention and Control of Noncommunicable Diseases to Kyrgyzstan was conducted in March 2016. Two joint United Nations follow-up visits to Kyrgyzstan were undertaken in August 2016 and October 2016 to discern the economic impact on action and inaction on NCDs in the Republic. An investment case for the prevention and control of NCDs in Kyrgyzstan

was published in 2017. Three analyses were conducted. Detailing their relative returns on investment, the economic burden analysis reveals that losses from NCDs amount to a significant percentage of gross domestic product; the intervention costing analysis estimates the funding needed to implement various policy and clinical interventions for prevention; and the cost-benefit analysis compares these implementation costs with projected health gains, identifying which policy packages offer the highest returns on investment (3). Following the ministry of health's request for an economic analysis of the cost of NCDs, the economic burden reveals that government spending on health care for NCDs represents only a small portion of the total costs. The hidden expenses from lost productivity are nearly four times greater, amounting to 14.6 billion som. In total, the annual economic cost of NCDs to Kyrgyzstan is 17.1 billion som, which corresponds to 3.9% of the country's annual gross domestic product (3). Furthermore, it was seen that preventing NCDs in Kyrgyzstan is both affordable and cost-effective, requiring collaboration across various sectors beyond health, such as finance and agriculture. Economic modelling indicates that salt-reduction interventions offer the highest return on investment, with a benefit-to-cost ratio of 12 over 15 years. Increasing tobacco taxes and promoting physical activity are also highly cost-effective, with their economic benefits greatly outweighing the costs in the long run.

Contribution to Task Force Strategic results

Multisectoral response on NCDs

The Task Force inputs appear to have contributed to a series of advances in the national NCD response as part of the National NCD Strategy revision, including the continuation of the national Den-Sooluk programme, the cardiovascular disease management roadmap, the beginnings of a pilot project concerning the development of a Cancer Registry and contributions to the cancer control programme. The Task Force continues to support the ministry of health with intersectoral dialogue on NCD-related issues, including in the Framework of Health 2020. The government is pleased with the level of collaboration that has been fostered in-country using the multisectoral approach the Task Force advocates for: "the NCD mission was absolutely useful because for the first time the ministries and the agencies were streamlining their efforts together".

National coordination

Kyrgyzstan has made significant strides in improving health sector coordination, particularly through the Kyrgyz Republic Health Sector Strategy (2019–2030). This strategy emphasizes the importance of inclusive partnerships and coordination among various stakeholders, including government bodies, international organizations and civil society, to effectively implement health programmes and achieve UHC. A commitment to health equity is reflected in the National Health Strategy, which aims to ensure access to essential quality health services for all individuals, particularly marginalized and vulnerable populations. The strategy outlines measures to reduce financial hardship and improve health outcomes across different demographic groups.

Nigeria Country Deep-Dive

Selection rationale

Nigeria was selected as one of two deep dive countries for this evaluation on the following criteria:

- a country in the WHO African region, because of the weak indicators on NCD multisectoral response in the region;
- the timing of the mission which took place in 2020, providing enough time to document medium-term changes following it; and
- the presence of the EU funded joint programme between the United Nations Development Programme and WHO UHC-Partnership which offered a mechanism to pursue interagency collaboration following the Task Force mission.

Data sources

Eight stakeholders were interviewed remotely:

- Ministry of Health Mental Health and NCD Departments (2)
- WHO regional office (1)
- WHO country office (2)
- UNDP country office (1)
- Civil society organizations (2)

The following documents were consulted (unless otherwise indicated, all items published in Geneva by WHO):

- Catalysing country action for noncommunicable diseases and mental health governance and investment. Reporting 2021–2023 results from joint WHO and UNDP country activities; 2024. (uniatf.who.int/docs/librariesprovider22/default-document-library/report-uhc-p-eu-project.pdf?sfvrsn=21977a2a_3&download=true).
- NCD Monitor 2022; 2022 (<https://iris.who.int/bitstream/handle/10665/353048/9789240047761-eng.pdf?sequence=1>).
- Nigeria country cooperation strategy (2023–2027); 2024 (<https://iris.who.int/bitstream/handle/10665/378243/9789290343363-eng.pdf>).

- United Nations Development Programme country programme document (2023–2027) (https://www.undp.org/sites/g/files/zskgke326/files/2023-06/undp_nigeria_cpd_2023-2027.pdf).
- United Nations Sustainable Development Cooperation Framework (2023–2027). Abuja: United Nations Nigeria; 2023. (<https://unsdg.un.org/download/6379/77103>).

National context

NCDs accounted for about 27% of all deaths in Nigeria in 2021. The age-standardized mortality rate across four major NCDs was 565 per 100 000 in males and 546 in females.² In relation to the NCD prevention and control response, NCD progress indicators for Nigeria show that the country is on track on the NCD national targets monitoring and policy framework, and on some indicators related to controlling risk factors (tobacco advertising and health warnings, alcohol taxes and availability restriction, breastmilk substitutes). However, other aspects of the NCD response are not on track, such as tobacco smoke free policies, taxes and media campaigns, alcohol advertising bans, measures to control unhealthy diets and physical activity awareness. Indicators relating to NCD management in terms of both management guidelines for the main NCDs and availability of services are also off-track as shown in Table 1 below.

Table 2 Nigeria NCD profile. Source: adapted from NCD Monitor 2022

National NCD targets
Mortality data
Risk factor surveys
National integrated NCD policy/strategy/action plan
Tobacco: increased excise taxes
Tobacco: smoke-free policies
Tobacco: graphic warnings/plain packaging
Tobacco: ban on advertising
Tobacco: mass media campaign
Alcohol: restriction on physical availability
Alcohol: advertising bans
Alcohol: increased excise taxes
Unhealthy diets: salt policies
Unhealthy diets: saturated/transfat policies
Unhealthy diets: marketing to children restrictions
Unhealthy diets: breastmilk and substitutes
Physical activity: public education and awareness campaigns
Guidelines for management of cancer, cardiovascular disease, diabetes and cardiovascular diseases
Drug therapy/counselling to prevent heart attacks and strokes

The suicide mortality rate was 4.9 per 100 000 in 2021, compared to 9 per 100 000 globally (4).

The national multisectoral plan on NCDs from 2019 is fully aligned to the WHO NCD GAP and its Appendix 3 on “best buys”. The country has adapted key technical guidelines on PEN+, HEARTS and the mental health GAP, as well as using the WHO tool for the national multisectoral action plan (NCD MAP Tool). The national plan mentions the need to strengthen the integration of health services for NCDs and communicable diseases such as tuberculosis. The

² Global Health Observatory Total NCD mortality rate (per 100 000 population) , age-standardized available at <https://www.who.int/data/gho/data/indicators/indicator-details/GHO/gho-ghe-ncd-mortality-rate>

National Tuberculosis Control guidelines also mention the need for integration with NCDs within a universal health coverage approach.

Task Force contributions

Activities conducted

A Joint UN-government high-level mission took place in February 2020. Fifteen UN agencies³ visited Nigeria. The joint mission centred on catalysing the multisectoral response to NCDs and tuberculosis. The rationale behind this focus is to support the follow-up on the commitments made by the President of Nigeria at the UN High Level Meetings on tuberculosis and NCDs in 2018. The meeting was co-led by the Task Force and WHO. The joint mission identified significant gaps in fiscal, regulatory and legislative frameworks and in implementation capacity for both NCDs and tuberculosis. It also identified significant co-benefits of integrating targeted services for tuberculosis and NCDs in PHC.

Following the joint mission, Nigeria was included as one of seven countries in a European Union-funded joint programme implemented by UNDP and the WHO UHC-Partnership aimed at catalysing action for NCDs and mental health governance and investment. Although it included aspects of strengthening the overall national multisectoral response to NCDs, the joint programme, implemented between 2021 and 2023, focused more on mental health and NCDs and did not seem to include support for NCDs and tuberculosis integration.

Contribution to Task Force strategic results

Multisectoral response on NCDs

The joint mission provided a platform to secure high level commitment and buy-in to the NCD response beyond the ministry of health, including the ministry of finances and the vice presidency. The mission also visited two governorates and secured political buy-in at that level (State Governments of Lagos and Kano). Nigeria's multisectoral NCD plan (2019) was already in place at the time of the mission, and the mission could build on this to secure more political commitment to its implementation. A country respondent considered: "The mission helped to prioritize NCDs internally. Government was able to put a lot of focus on NCDs, after that the government was able to include NCD interventions in the health insurance scheme and increase financing on NCDs."

The joint mission appears to have made several lasting contributions to the national multisectoral response. Some of its recommendations were followed up through the WHO-UNDP joint programme, which made several key contributions in strengthening the policy and institutional environment for NCDs.

Part of the joint programme agenda focused on mental health, leading to the reform of the 1958 Lunacy Act and supporting the development of a mental health bill that eventually led to the setting-up of a mental health department in the ministry of health in 2022. The policy framework was also strengthened, with the national NCD multisectoral policy and national suicide prevention framework and a new mental health policy adopted.

While there appear to be clear contributions of the Task Force mission and joint programme in terms of mobilizing high level stakeholders on NCDs and mental health, follow-up actions to secure financing and follow up on commitments to ensure the effective implementation of the national NCD multisectoral action plan were not as clearly outlined. For instance, while the joint programme contributed to the creation of the mental health department, this department is largely underfunded, with no specific budget line for activities. More capacity-

³ The Africa Development Bank, FAP, IAEA, IOM, OHCHR, Public Health England, UNAIDS, UNDP, UNHCR, UNICEF, UNFPA, UNODC, USAID, World Bank and WHO.

building is needed for it to implement the roadmap for implementation of the mental health policy and to ensure that mental health is integrated into the NCD agenda where relevant. A government respondent also noted that more engagement is needed at sub-national level to maintain momentum in the governorates visited by the mission and expand activities in other directorates.

National coordination

Contribution by the joint mission to multi-stakeholder coordination led by the ministry of health appears limited, and this area is not highlighted in the recommendations. This area was covered to some extent by the joint programme, which provided support to the national NCD coordination mechanism and contributed to the launch of the National Tobacco Control Committee.

The Mission report includes recommendations on civil society engagement,⁴ in particular in the frame of improving participation and implementing rights-based approaches. Civil society respondents interviewed considered that they had been able to participate in the joint mission to present the progress achieved and express their expectations. While the extent of the contribution of the joint mission to this is unclear, they also reported being increasingly invited to participate in coordination mechanisms on NCDs and tobacco control. One respondent considered that “there had been an improvement” on the engagement with the Federal Ministry of Health. They also recommended that a broader range of organizations are involved in the follow up to the mission, including the Nigerian Cancer Society, Hearts Foundation, Sickle Cell Foundation but also community networks of people living with mental health conditions and disabilities.

Better financing frameworks

Progress on securing additional funding has been slow. The Task Force mission has recommended raising funds for NCDs and tuberculosis from taxing health-harming products, such as tobacco, alcohol and sugar-sweetened beverages. In this respect, a country respondent explained that tobacco, sweets and beverages and alcohol taxes still go to consolidated funds but are not directly allocated to the NCD division. They considered that the Task Force and UNCT could do more to support ongoing advocacy efforts by the Ministry of Health on this: “We have been pushing for a marking of a fraction of taxes for NCD prevention and control. We really want the Task Force to push on this. This would help to achieve strategic objectives.”

The development of case studies by WHO and UNDP has been identified as a key strategy to increase funding for NCDs and mental health. Although the joint programme had initially planned to conduct an NCD investment case as per the Task Force mission recommendation, this could not be delivered by the UNDP country office as the planned budget was insufficient to carry it out and so was not released to them.

UN working as one on NCDs

In line with the Task Force recommendation, the current UNSCDF in Nigeria mentions NCDs as part of Output 3.1.1 (5), suggesting this would be an area for collaboration within the UNCT. Ministry of Health respondents considered however that the overwhelming majority of the support they receive for NCDs and mental health is from WHO and that engagement of other agencies remains limited. One country respondent commented: “We expected that after that mission there would be a lot more collaborations with others.”

The WHO Country Office in Nigeria has been able to implement follow-up activities to fulfil some of the Task Force recommendations and ensure the continuity of the joint programme contributions. Examples include integrating NCDs and tuberculosis treatment into PHC package of basic services and social protection and health insurance

⁴ The recommendation of the joint mission is to “leverage existing networks of civil society organizations, and other key stakeholders including from private sector, academia and partners, to monitor and provide oversight and accountability to the implementation of the National NCD Multisectoral Action Plan and National Plan for Translating the Commitments from the UNHLM on TB to Action.”

mechanisms and supporting the setting up of the national mental health programme. The WHO country cooperation strategy (2023–2027) strategic priority 3 includes relevant outputs on strengthening the implementation of the Mental Health Act and improving capacities for NCD screening, detection and management through the implementation of PEN+.

Key recommended activities by the joint mission have not been implemented, notably the NCD investment by UNDP and WHO.⁵ The UNDP country programme document (2023–2027) does not mention NCDs or have a focus on health. There have, however, been collaborations with WHO as part of UNDP's work on poverty reduction and governance on the development of the policy framework for NCDs. Other UN agencies appear to have had limited engagement on NCD and mental health in Nigeria. Some work is reported by UNICEF on mental health, by UNFPA on mental health as part of the gender-based violence response, by UNIC on tobacco control and by UNAIDS on strengthening the integration of HIV and NCD services. These different streams of work are considered to some extent "siloe" by respondents consulted. In this sense, the Task Force joint mission appears to have had limited success in securing UN-wide collaboration on NCDs and mental health. While some of the recommendations are being carried forward by the ministry of health and WHO, broader mobilization of resources and coordination beyond those is still limited, as was reflected in the mission report: "Overall, leadership and responsibility for action rests within the health sector rather than across government."

Influencing factors

- Follow-up to the joint mission by country stakeholders was hampered by the onset of the COVID-19 pandemic, which meant that most national actors involved were redirected to the COVID-19 response.
- High turn-over in government counterparts, as several NCD coordinators were in place after this, limited the ability of the ministry of health to follow up on recommended actions. As a result, national actors engaged in the joint programme were not very familiar with the UN Task Force mission outcomes.
- Based on the evidence reviewed, the involvement of country level stakeholders in the planning of the joint mission and joint programme may have been limited. One country respondent commented that "the Mission took me by surprise" and considered that there needs to be much more involvement of relevant UN country offices and national counterparts before envisaging a "country-owned process".
- Despite the presence of the joint programme, follow-up of the joint mission was not as systematic as required, possibly because the Task Force did not have an avenue to maintain the momentum with the UNCT. A national stakeholder commented in this respect: "We expected that after that mission there would be a lot more collaborations with others. More needs to be done, we could achieve more if there was a continuous communication to the political hierarchy in the country and that is a challenge."
- Task Force recommendations have sometimes remained high level and not clearly identified entities responsible for their implementation.⁶

Country next steps

- There is need for more continuous engagement by the Task Force after the joint mission, to secure and sustain political buy-in as well as advocacy efforts.
- There is need to strengthen the role of the UNCT in the mission follow-up. Suggestions have been made in this respect by country actors in line with the joint mission recommendations: to convey a meeting of all UN agencies in country to revisit the recommendations of the Task Force visit and develop a joint

⁵ The joint mission recommends: "An NCD investment case to be conducted under the WHO-UNDP global joint programme to catalyse multisectoral action."

⁶ For example, the joint mission recommends: "Address underlying determinants of health including stigma, discrimination, poor living conditions and the right of the child to grow and develop."

workplan for the UN agencies engaged to some degree on NCD and mental health in Nigeria and build NCDs and mental health into UN agencies country workplans.⁷

- There is a need for the UNCT to support the ministry of health advocacy efforts to direct a fraction of taxes on tobacco/alcohol/unhealthy foods to the NCD and mental health response implementation.⁸
- There is a need for more country involvement in the planning phase of joint missions and programmes. When implementing joint programmes like the UNPD/WHO UHC Partnership, consider disbursing funds at country level and ensuring that country actors are involved in the operational planning to avoid issues in implementation.

⁷ The joint mission recommends: “The UN Resident Coordinator should task one of the existing UN working groups in Nigeria to review the recommendations of this report and develop a prioritized action plan for UN support to the Government on TB and NCDs, including through the NCD Technical Working Group”

⁸ The joint mission recommends: “In addition to domestic resources that come predominantly from general taxation, maximize opportunities to raise funds for NCDs and TB from taxing health-harming products, such as tobacco, alcohol and sugar-sweetened beverages.”

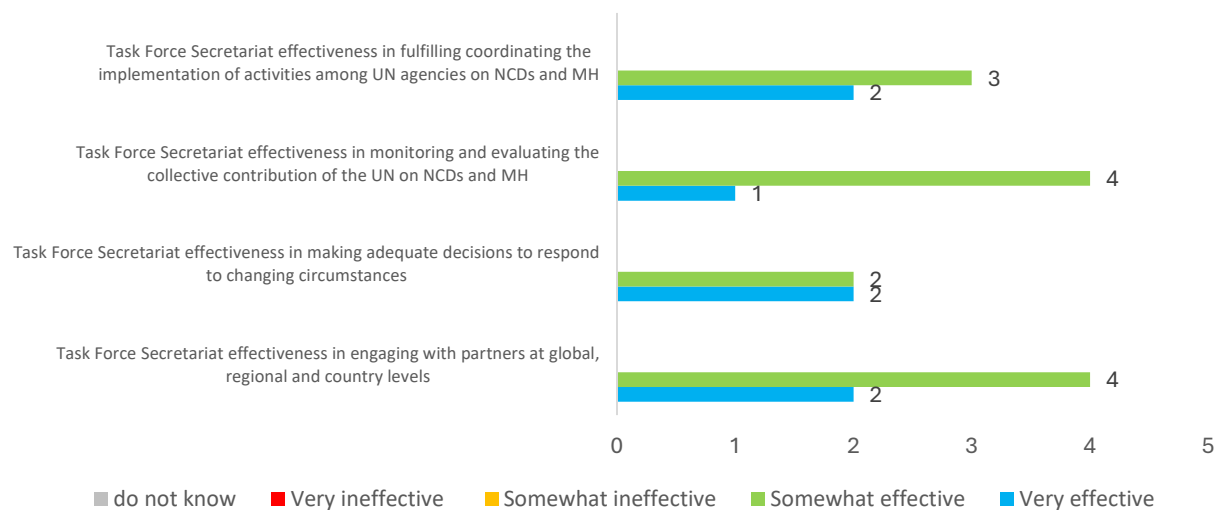

Annex 7. Survey results

- Nine focal point respondents: 5 female, 3 male and one who did not indicate gender.
- All respondents indicated they were familiar or very familiar with the Task Force's work.

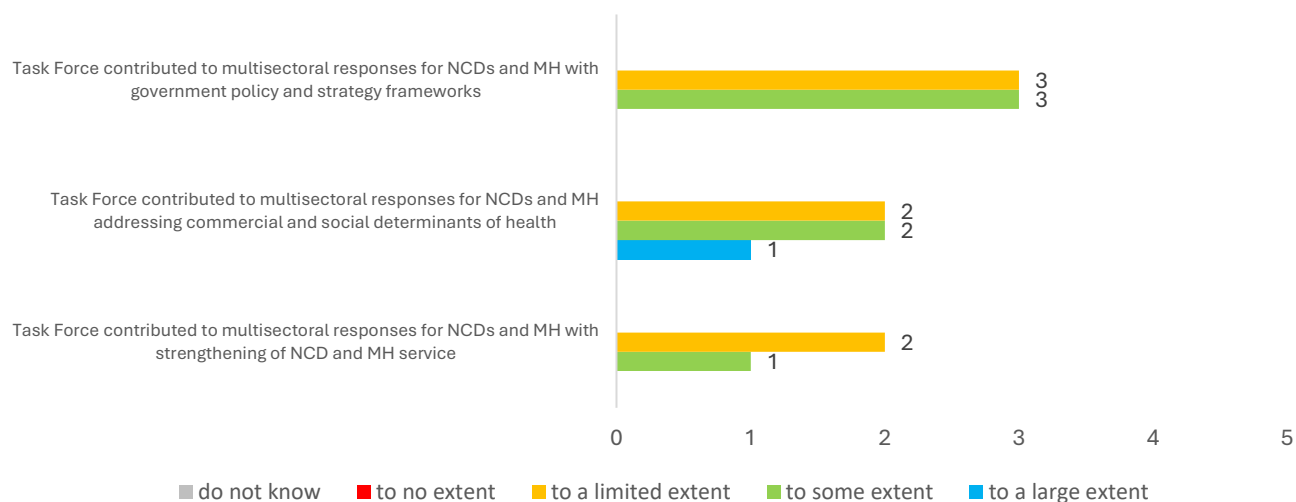

Alignment

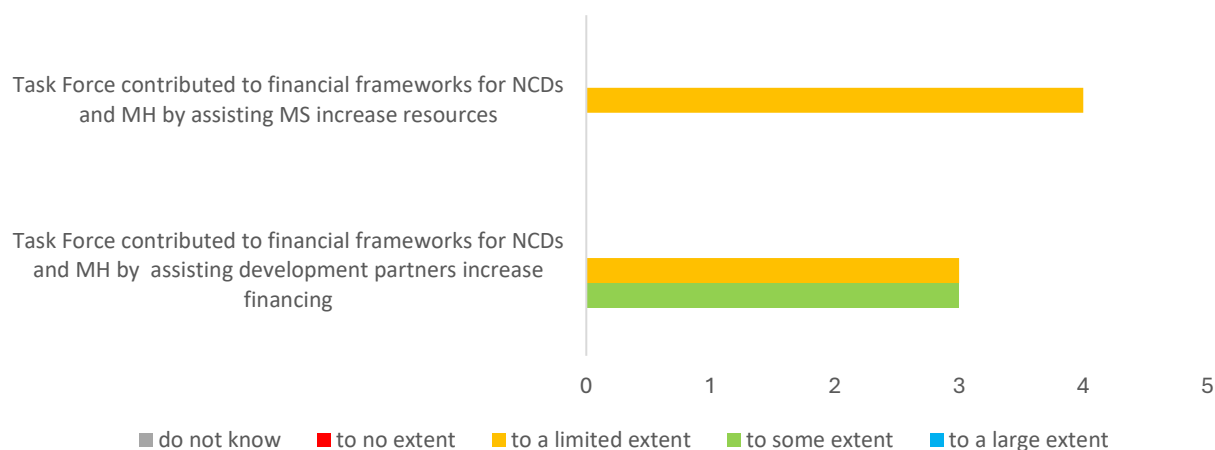

Effectiveness of Task Force Secretariat

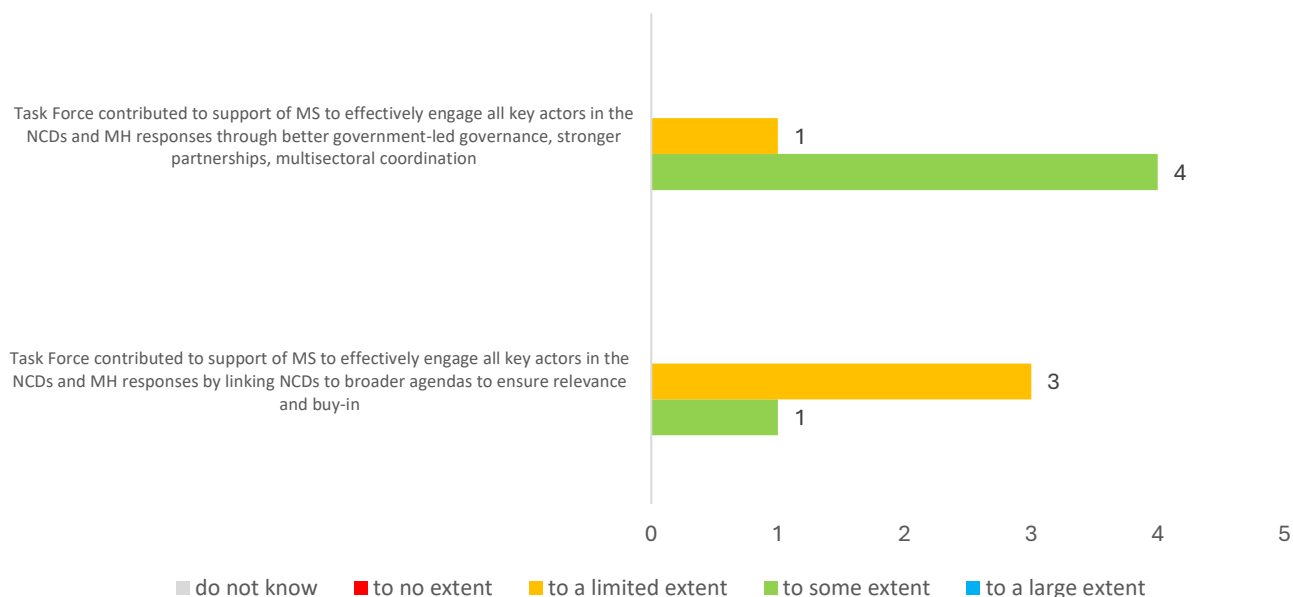

Effectiveness on multisectoral responses for NCDs and MH

Effectiveness on improved financial frameworks for NCDs and MH

Effectiveness on supporting Member States to engage all actors

Effectiveness on increasing UN agencies efforts on NCDs and MH

Resourcing of NCDs by Task Force members

Gender, equity and human rights

To what extent are the contributions of Task Force likely to be durable over time if the Task Force ceased to exist?

Annex 10. Indicative M&E framework results

This annex presents available data against the indicative M&E framework of the Task Force Strategy (202–2025). The 2021 baseline was calculated by the Task Force Secretariat based on the activities conducted during the 2019–2021 Task Force Strategy. The 2024 available data presents data gathered during the evaluation on the indicators, as well as the gaps noted in the data.

Indicator	2021 Baseline	2024 available data
1. Number of countries that request and receive policy guidance and technical support from the Task Force for which there is evidence that recommendations are being implemented	55 between 2019 and 2021	26 between 2022 and 2024 (based on Task Force website). However, there is no systematic way of documenting implementation of recommendations of joint missions. UNDP tracks implementation of recommendations from investment cases, but this is not reported by the Task Force
2. Number of UN-led global, regional and national joint programmes and initiatives in place, resourced and delivering at national level	N/A	8 Joint Programmes on NCDs, some of which have been initiated through the Task Force, others outside it: NCD 2030, FCTC 2030, Be Healthy Be Mobile, Defeat-NCD Partnership, SAFER, Global RECAP, Access Initiative for Quitting Tobacco, Cervical Cancer Joint Programme.
3. Multi-partner Trust Fund capitalized and disbursing funds to countries	No	MPTF is capitalized: 2022 first pledge from Scottish government pledged US\$ 3 million over 5 years in 2022, and Lilly Foundation US\$ 4 million. Mauritius and Philippines announced their membership in 2024, with budgetary allocation although the pledges are not yet known. 2 countries have been approved to develop full proposals: Rwanda and Zambia, for about US\$ 1 million over 3 years.
4. Number of countries with projects funded by multilateral development banks and by the Global Fund to Fight HIV/AIDS, Tuberculosis and Malaria that include SDG targets related to NCDs and mental health	47 countries between 2019 and 2021	N/A. This may be obtained through the Task Force survey to its membership, which was administered in 2014, 2015, 2016 and 2023.
5. Number of countries supported by the Task Force to increase domestic and/or development assistance funding for NCDs and mental health	16 countries between 2019 and 2021	Based on the paper <i>Troisi, G et al. The reported impact of non-communicable disease investment cases in 13 countries. BMJ; 2023</i> . 14 out of 46 measures adopted in 13

		<p>countries in the study pertained to improved financing for NCDs.</p> <p>However, no economic impact assessment was conducted on investment cases.</p> <p>No data available for mental health</p>
6. Number of countries that receive support from the Task Force and/or its members to strengthen multistakeholder coordination and action	N/A	<p>N/A. This support is mainly provided through joint-missions. There is qualitative evidence, for example from Thailand on strengthening NCDs in UNCT. However, there is no system in place to track joint missions recommendation implementation in country regularly.</p>
7. Operational partnerships between governments and the private sector catalyzed by UN system	25 countries between 2019 and 2021	N/A as above
8. Countries in which the Task Force has catalyzed multi-agency, multi-sectoral action for NCDs and mental health	N/A	N/A as above
9. Number of countries for which Cooperation frameworks include SDG targets related to NCDs and/or mental health, including target 3.a on implementation of the WHO FCTC, with evidence of funds available for joint programming and implementation	During the 2020/2021 UNITED NATIONS SUSTAINABLE DEVELOPMENT COOPERATION FRAMEWORK rollout, 79% (30/38) integrated NCDs	During the 2022/2023 UNITED NATIONS SUSTAINABLE DEVELOPMENT COOPERATION FRAMEWORK rollout, 77% (75/97) integrated NCDs
10. Task Force members have prioritized national action aligned with the “best buys” endorsed by the World Health Assembly and effective interventions, in line with countries’ response to and recovery from COVID-19	68% (2016 data)	<p>N/A, although some information can be obtained from the peer-reviewed paper on the impact of investment cases, tracking results attributable to investment cases in 13 countries, and the second join mission report in Sri Lanka includes a potential framework to track implementation of Task Force recommendations from the first mission which could be replicated to track contribution of the Task Force to “best buys” implementation.</p>
11. Task Force members implement healthy workplace policies and the model policy for agencies of the United Nations system on preventing tobacco industry interference	8 Task Force Members	10 Task Force Members (based on UN Task Force survey)
12. Proportion of Task Force activities and outputs that include substantive action to promote human rights	N/A	N/A. This indicator is not tracked.
